Press Release

Model 1600 Front/Back Labeler with Multi-Product Positioner

Labeling Systems Inc. has recently supplied a front and back labeler incorporating their multi-product positioning system. The system allows for square, rectangular, or oval shaped containers to be correctly aligned for consistent and accurate front /back labeling. This unique system does not require change parts typically associated with product infeed systems. The machine was supplied with optional hard anodize finish and is capable of speeds to 120 products per minute.
