Press Release

Model 1960 CD/Cassette Labeler

Labeling Systems Inc. (LSI) recently supplied this pressure sensitive labeling machine to over label audio CD jewel boxes and cassettes.

This machine operates off-line and is fed by an infeed product hopper. This hopper is interchangeable for different product sizes. The machine incorporates the air cylinder tamp-type applicator offering positive label control during the application sequence. The pusher lug conveyor allows for a consistent presentation of the product to the label applicator. This combination of label and product handling techniques give repeatable label placement accuracies to $\pm 1/32$ ".
