Press Release

Model 2800 Corner Wrap Print & Apply Labeler

Labeling Systems Inc. (LSI) introduces the 2800 Series of pressure sensitive labelers.

This compact machine is designed to integrate into case sealing or similar equipment. The machine can operate equally effectively on existing conveyor lines as well.

Supplied with virtually any thermal transfer printer, the machine incorporates a simple and effective corner wrap applicator. No speed matching is required. The design allows for tight adherence to the corner of the carton while accounting for the inconsistencies inherent with corrugated boxes.
