Press Release

Model 2998 Corner Wrap Print & Apply

LSI recently provided a customized labeling system to a major pharmaceutical company. Supplied with a 300 dpi Zebra thermal transfer print engine, the Model 2998 Labeler was designed to apply leading and trailing corner wrap labels to various sized chipboard boxes. A flexible head mounting configuration allowed the operator to easily re-position the labeling head and cut down drastically on changeover time. The labeling head also includes a LCD screen display controller to further simplify machine changeover.
