## Model 3990 High Accuracy Labeler

Labeling Systems Inc. (LSI) introduces the Model 3990 High Accuracy Labeler. Built for placing labels to + 0.005" accuracy. A custom label application positioning system eliminates the variation caused by the slitting of the label web.

This Stepper Drive Labeler uses a web path that does not add curl to thick label materials. The fixture is engineered to be rigid and to be adjustable to accommodate various product sizes. An electronic non-contact sensor system ensures the operator's hands will be clear of the applicator during the label application sequence.
