Press Release

Model 4520 Water Bottle Labeler

Labeling Systems Inc. (LSI) introduces the Model 4520 in-line wrap labeler. This machine is designed for speeds to 250 products per minute. The stepper motor drive labeling head has a 16" O.D. roll capacity. It is also equipped with an electronic clear label sensor. This sensor can also work effectively with standard laminated paper stock material.

The rugged plate conveyor is mounted to a rigid mainframe cabinet. Stainless steel components are also utilized in the design due to the environment requirements of the application.
