Press Release

Model 5352 Video Cassette Labeler

The Model 5352 Video Cassette Labeler is designed and manufactured to give long term accurate labeling without adjustment. The labeler stops the product momentarily. Our "tamp" applicators apply top and spine or the new two panel label with much higher accuracy than is possible with other application methods. Its infeed hopper, re-stacker and optional straight through or right angle feed to your conveyor allow complete versatility for any need. On product label inspection is available as an option to allow automatic feeding to your packaging line. It also can be used with the re-stacker hopper and a second hopper for ejects or just ejected off the end of the labeler via a chute.
