Press Release

Model 7600 Newspaper-Mailing Address Labeler

Labeling Systems Inc. (LSI) introduces the Model 7600 Newspaper/Mailing Address Labeler for high speed production lines. Stepper motor driven, the labeling head was designed to apply mailing labels to newspapers at speeds up to 1000 labels per minute. This system utilizes fan-fold labels to feed the labeling application, thus eliminating the need for roll changes. A dual dot recognition system is incorporated into this system to signal the newspaper feeder/collator when there is a change in the zip code.
