Press Release

Dual Corner Wrap Carton Labeler

Labeling Systems Inc. (LSI) announces the Model 9900 Dual Corner Wrap Carton Labeler. This system allows the customer to use generic cartons with prime labels to reduce expensive pre-printed carton inventories. The Model 9900 Labeler gates the carton to a stop. Two separate labeling stations allow air cylinder applicators to apply labels to the front/side and side trailing panels. Specific label sizes up to 21" long can be applied. The labeling heads feature a fully supported dual bearing drive system. This gives positive dispense of the label without skew. Speeds up to 25 cartons per minute can be achieved.
