# Press Release

## Model 9900 Indexing Lipstick Labeler

Labeling Systems Inc. (LSI) introduces the Model 9900 Indexing Lipstick Labeler. Built for a major cosmetics manufacturer, this system applies labels up to 120 products per minute to an accuracy of 1/64".

An intermittent motion product handling system is used along with a product positioning system at the point of labeling to ensure accurate results. The labeling head uses a stepper motor drive for high reliability. An optional Allen Bradley Vision System was used to inspect the lip sticks for labeling accuracy. If the products are mislabeled, they are ejected from the system.
